

FilterLoc

FILTER TRACK SYSTEM

FilterLoc is RTT's new zip-to-lock filter track technology which provides a tighter seal to the booth eliminating overspray bypass into the exhaust chamber. The new track technology provides savings by allowing the utilization of roll media, reducing overall cost. This efficient system decreases overall filter change out time.

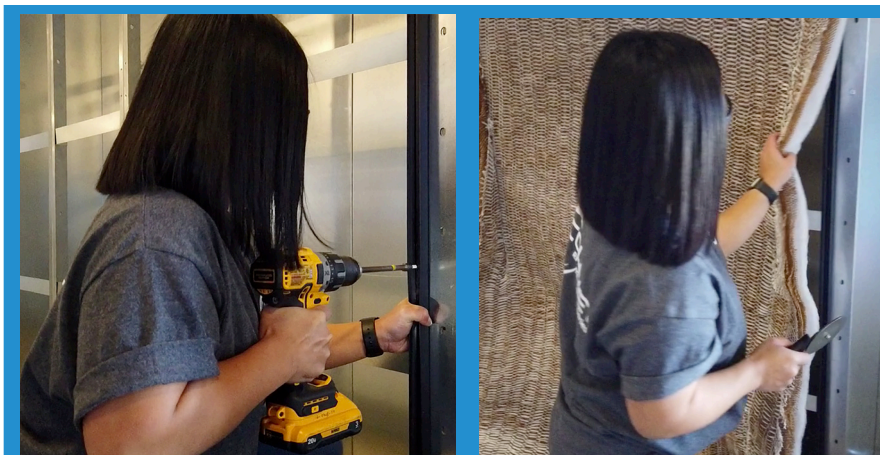

FilterLoc, for use with all RTT W-Series products, is the quick and easy way to change out filters by eliminating the need for clips or pins. FilterLoc track is designed to be mounted to the spray booth. Once the track is mounted, it only takes seconds to secure the filter in place eliminating the need to overlap filters, saving money.

Features

- FilterLoc allows the use of blanket media reducing cost
- Quick and easy track installation
- Fast and easy filter change out reducing downtime and maintenance costs
- Changing pads to blanket filter media reduces replacement costs.
- FilterLoc track system accommodates RTT RP Arrestor W-Series exhaust filtration with industry leading 5-year warranty.

FilterLoc allows RTT manufactured W-Series blanket media to be used reducing exhaust filtration costs.

Simple Two-Step Installation

1. Install FilterLoc onto spray booth.
2. Roll exhaust filtration blanket media into FilterLoc track with tool provided.
